

So many moving parts. One way to keep them together.

The Vocera Smartbadge is a wearable communication device that enables clinician agility and accelerates patient care. Small, lightweight, and purpose-built for healthcare, the Smartbadge redefines healthcare communications by bringing together voice calling, secure messaging, and alerts and alarms in a lightweight wearable.

Complexity begs simplicity.

The pace, complexity, and unpredictability of the hospital environment cause care team members to multitask and reprioritize constantly. Care teams need to field multiple interruptions and shifting variables in real time while still delivering the best possible patient care. They need tools that help them to identify priorities, access information, and communicate effectively – yet allow them to keep both hands free so they can communicate and access and share information without interrupting patient care. It's often impractical and inefficient for clinicians to manage a smartphone when providing hands-on patient care.

Imagine neonatologists and nurses caring for sick babies in a closed unit: Both hands are engaged with tiny patients and infection control is paramount. The need to communicate across obstructed lines of sight means stopping to use a phone and then washing their hands – yet again – before care can continue. Now imagine a hundred such moments for those nurses and doctors, every day.

It's time to change the conversation.**Meet the Vocera Smartbadge.**

Designed to enable clinician agility and accelerate patient care, the Vocera® Smartbadge is an entirely new approach to patient-centered healthcare communication. Leveraging our nearly two-decade track record of responding to the challenges hospital clinicians face every day, the Smartbadge redefines and revolutionizes the way care teams connect, collaborate, and act.

Situational awareness. In sync.

The Smartbadge is powered by the Vocera Platform, which enables data to be aggregated from most clinical and operational systems used in hospitals today. The Smartbadge allows patient information from those systems to be presented in parallel with notifications to enable real-time situational awareness and help reduce interruption fatigue.

Bring the care team in. Even when they're out.

Just say a name, a role, or a group name to connect instantly with care team members inside or outside the hospital. There's no need to remember phone numbers or keep track of who's on call. The Smartbadge responds to more than 100 voice commands through an optimized speech-recognition engine.

You can send broadcast messages easily to rapid response groups, such as code blue and sepsis-response teams. A dedicated panic button allows you to summon help instantly.

**Built for ease. Built for agility.**

The Vocera Smartbadge is purpose-built for patient care. It enables care team members to:

- Make and answer calls hands-free
- Receive alert and alarm notifications in tandem with patient information for real-time situational awareness and to help reduce interruption fatigue
- Connect with the right person simply by saying a name, role, or group name

Built for privacy.

Built for convenience.

In addition to voice activation, the Vocera Smartbadge also allows users to:

- Send and receive secure text messages
- Read messages as easily as with a smartphone

Lightweight. Lightning fast.

The Smartbadge is light enough to wear comfortably. Clip it to your shirt for hands-free operation or hold it to your ear for privacy. Use the touchscreen keyboard to find contacts quickly and send secure text messages. Read messages as easily as with a smartphone, and see important, actionable information at a glance on the ample screen.

One device. Improved control.

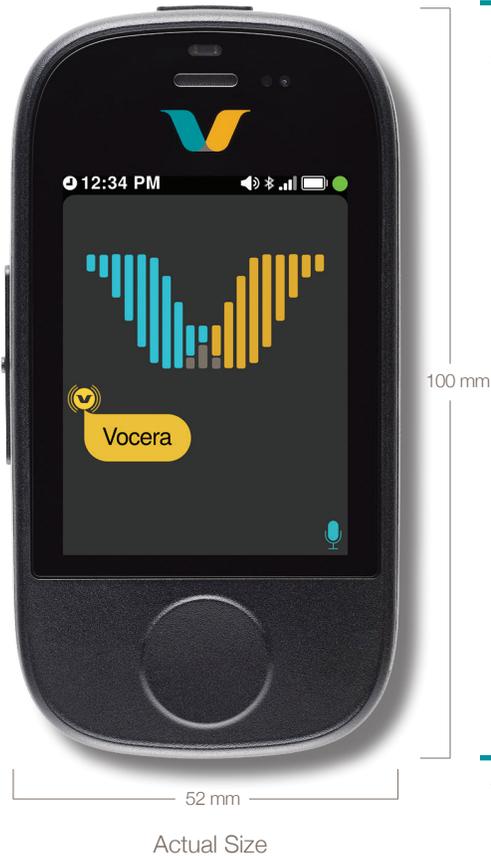

Hardware, software, and firmware are integrated in the Smartbadge, so your organization has control over what takes priority and is presented to the end user. And since the embedded software is designed specifically for healthcare, there's no need to layer on additional applications.

Diverse needs. A single platform.

The Vocera Platform lets you standardize on an application while allowing clinicians and staff to communicate in a variety of ways using the device that is right for their role – Smartbadge, Vocera Badge, Android or iOS smartphone, or desktop console. Our platform can scale from a single department to an entire integrated delivery network.

🔒 We're proud to call the security of Vocera solutions defense-grade. The security credentials we've earned from the U.S. Army, Department of Defense, and American Institute of Certified Public Accountants are unsurpassed and demonstrate our technology's enablement of HIPAA compliance.

Technical Details

Device specifications

Dimensions: 100mm x 52mm x 17mm
2.4" touchscreen with haptic touch call button
89g, comfortable to wear
Illuminated LED light for call status and presence visualization
Dedicated one-touch panic button
"Do not disturb" button
Microphone array
Hands-free speaker
Dedicated handset mode receiver
Bluetooth-enabled
USB C charging port
802.11ac dual-band wi-fi
Supports shared devices
Removable battery with 4 hours active battery life, 40 hours standby
8-bay charging stations
Wearable accessories
Ruggedized for the healthcare environment
Integrated hardware, software, and firmware

System requirements

Vocera Voice Server 5.3.1 or later, and Vocera Messaging Server 5.3.1 or later
